

Beas Manufacturing

THE SOLUTION FOR YOUR MANUFACTURING COMPANY

Boyum IT is the largest and best-known global software solution partner for SAP Business One. Beas Manufacturing is the ideal solution for companies in **discrete and process manufacturing** that want to optimize their processes, reduce costs, and increase productivity.

With over 17 years of industry experience, more than 900 customers, and a global presence in over 110 countries, Beas Manufacturing is the leading partner for manufacturing companies striving for efficiency and innovation.

KEY FEATURES OF BEAS MANUFACTURING

Beas Manufacturing optimizes production resources through precise capacity and material planning, reduces throughput times, and efficiently meets customer requirements. **Real-time data and dashboards** enable informed decisions and full transparency.

The software provides accurate **product cost analysis** by comparing target and actual costs and improves efficiency through automated bill of **materials management**. With **supply and demand management**, Beas reduces excess inventory and optimizes storage costs for maximum manufacturing efficiency.

SAP BUSINESS ONE AND BEAS MANUFACTURING: THEY FIT TOGETHER

It is crucial for decision-makers to have a complete picture of business processes in order to make informed and effective decisions. This requires the seamless integration of all ERP systems, applications, and data sources. Isolated functions that do not communicate with each other lead to incomplete results, complicate decision-making, and increase the risk of manual errors and data duplication.

The combination of SAP Business One and Beas Manufacturing creates a seamless connection between material and financial flows and industry-specific functions. SAP Business One handles sales, service, purchasing, and financial processes, while Beas Manufacturing meets specific manufacturing requirements. These include real-time production data capture, advanced planning and scheduling, and resource optimization functions.

This integration enables process automation, reduces errors, increases efficiency, and creates a stable foundation for the success of manufacturing companies. Anyone considering a manufacturing solution without an integrated ERP base should definitely consider the long-term benefits of an integrated platform.
