

ELO-Integration for SAP Business One

EFFICIENT DOCUMENT MANAGEMENT FOR YOUR COMPANY

The ANG ELO sidebar integrates SAP Business One directly with your SAP ELO archive, enabling simple, efficient document management. The data you need is immediately available and clearly organized without having to leave your work environment.

Documents and versions can be displayed with a single click. Files and documents from Word, Excel, PowerPoint, or other formats can be dragged and dropped into the ELO archive and edited from anywhere.

KEY FEATURES OF THE ELO INTEGRATION

ELO integration makes everyday work easier with numerous functions. Documents can be manually assigned to business partners or articles, enabling structured filing. Sales and purchasing transactions can be manually stored in project files, while documents from the ERP system are automatically transferred, increasing efficiency. Emails and other documents can be stored by drag & drop according to the transaction.

A clear digital folder structure with automated multiple links ensures transparency. The authorization concept with read and write permissions ensures that only authorized persons have access. ELO workflow management optimizes and automates business processes through defined workflows. In addition, ELO integration offers expansion options such as ELO Invoice for automated incoming invoice management, digital mailroom, contract management, HR management, and visitor management.

BENEFITS
