# ANG Rental Add-On

EFFICIENT RENTAL MANAGEMENT IN SAP BUSINESS ONE

The management of rental items poses challenges for many companies: inventory control, contract management, and accurate billing require a lot of manual effort and are prone to errors.

With the **ANG Rental Add-On**, the entire rental process is seamlessly integrated into SAP Business One. From quotation creation and automatic invoicing to the return of the rental item, you maintain an overview at all times – efficiently, transparently, and with system support.

KEY FEATURES OF THE ANG RENTAL ADD-ON

The ANG Rental Add-On extends SAP Business One with a special distinction between rental and purchase items. As soon as a rental item and a final item are included in the customer order, a rental agreement can be created directly from this. The delivery of the rental item automatically triggers a stock transfer to manage inventories correctly.

During the rental period, the first invoice is issued manually, after which billing can be automated on a monthly basis. When the rental item is returned, it is posted back to the rental or company warehouse via a return or manual stock transfer and is available for new rentals. Serial number-based tracking enables seamless inventory control, while the freight module automatically calculates and integrates statutory rental fees.

BENEFITS OF THE ANG RENTAL ADD-ON

Efficient processing: The entire rental process is fully integrated into SAP Business One, from quotation creation to final invoicing.

Automated processes: Monthly invoicing and stock transfers are performed automatically, reducing manual effort.

Maximum transparency: Thanks to serial number-based inventory tracking, all rental items can be traced seamlessly at any time.

Legal certainty: The statutory rental tax is calculated automatically and correctly integrated into the invoice.
