

CKS.DMS

SECURE AND EFFICIENT DOCUMENT MANAGEMENT

Digital document management is the key to greater efficiency in your company. cks.DMS from ck.solution is a powerful document management solution (DMS) that integrates seamlessly with SAP Business One.

It enables secure, structured, and automated management of all business-related documents—from invoices and contracts to receipts. Thanks to intelligent archiving and fast search functions, you can maintain an overview at all times and optimize your workflows.

KEY FEATURES OF CKS.DMS

cks.DMS enables audit-proof archiving of outgoing documents so that they are stored in an unalterable form. Documents in the SAP approval process can be viewed directly and compared with SAP documents. A simplified approval system allows documents to be checked before the SAP document is created.

In addition, inspection reports for batches and serial numbers can be archived and quickly retrieved. Recurring documents such as quotations and order confirmations are automatically assigned to the appropriate SAP documents via QR code and archived. The full-text search ensures that all archived documents can be found quickly and easily.

ADVANTAGES OF CKS.DMS

Increased efficiency: Automated document capture, workflows, and fast full-text search significantly speed up processes.

SAP integration: Seamless integration with SAP Business One ensures easy document management and archiving directly in your ERP system.

Legal compliance: Audit-proof archiving and compliance with GDPR and GoBD ensure adherence to legal requirements.

Flexibility: Mobile access to documents enables efficient working from anywhere, regardless of location.
